

3. Printing Client Address at Server Side

Aim : Design a socket program to print the client address at the server side

Algorithm

Server:

1. Import all the required io and net packages
2. Create a class Sip
3. Initialize the classes ServerSocket and Socket and their respective objects.
4. Initialize the class DataInputStream for reading the data from socket through getInputStream() method.
5. Establish the connection with client system using the client IP and port number 8020
6. Read the IP address from the socket
7. Print the IP address at the server

Client:

1. Import all the required io and net packages
2. Create a class Cip
3. Initialize the classes Socket and their respective objects.
4. Initialize the class PrintStream Class for writing data into the socket through getOutputStream() method.
5. Get the IP address of the system using InetAddress class with getLocalHost() method.
6. Establish the connection with server system using the IP address and port number 8020
7. Write the IP address into the socket
8. If any exception arise, print the error.

Program:

```
import java.io.*;
import java.net.*;
class Sip
{
    public static void main(String args[])
    {
        ServerSocket ss;
        Socket s;
        DataInputStream dis;
        String ip;
        try
        {
            ss=new ServerSocket(8020);
            while(true)
            {
                s=ss.accept();
                dis=new DataInputStream(s.getInputStream());
                ip=dis.readLine();
                System.out.println("Ip address of the client system is"+ip);
            }
        }
    }
}
```

```

    }
    catch(IOException e)
    {
        System.out.println("The exception is: "+e);
    }
}
}

import java.io.*;
import java.net.*;
class Cip
{
    public static void main(String args[])
    {
        Socket soc;
        PrintStream ps;
        try
        {
            InetAddress ia=InetAddress.getLocalHost();
            soc=new Socket(ia,8020);
            ps=new PrintStream(soc.getOutputStream());
            ps.println(ia);
        }
        catch(IOException e)
        {
            System.out.println("The exception is: "+e);
        }
    }
}

```

Output

Server side Terminal

```

Command Prompt - java Sip
Microsoft Windows [Version 10.0.19041.1083]
